

Do you have any Ajax loading image ideas for use with jQuery?

I have a page being loaded with jQuery. The initial load includes 100 records with 6 icons per record. Needless to say, it takes a few seconds to load and I want to give the user a "loading" prompt/animation.

Any ideas?

javascript

jquery

ajax

<http://www.ajaxload.info/> is a great resource for generating animated GIFs for this sort of thing.

11

Once you've got your animation, render it as part of the page; fire the jQuery load mechanism on the animation's onload() event (so you're certain the animation has loaded first), and use a callback at the end of your loading sequence to disable/hide the animated GIF.

1 that's the one, thanks a ton, that ajaxload.info is an extra bonus. Thanks again – [Gene R](#) Oct 9, 2008 at 19:46

You could display a div with an animated GIF image as a loading prompt. That's the way I've done it in the past.

Any time I've needed something like this I replace the element that will be loaded with a simple, centered, animated gif of some sort that says "Loading, please wait" or a similar message. If it's only going to be a few seconds a progress indicator is probably overkill, but a simple animation gives most people the assurance that, yes, your site is still working.

You may want to set up a global ajax event to show/hide the loading icon. Have a look at:

You can do a animation in CCS3, for example if you want a pulse:

0

The html markup:

```
<div class="pulse"></div>
```

The css:

```
.pulse {
  width: 32px;
  height: 32px;
  margin: 25% auto;
  background-color: #303030;
  -webkit-border-radius: 16px;
  -moz-border-radius: 16px;
  -ms-border-radius: 16px;
  -o-border-radius: 16px;
  border-radius: 16px;
  -webkit-animation: scaleout 1.0s infinite ease-in-out;
  animation: scaleout 1.0s infinite ease-in-out;
}
@-webkit-keyframes scaleout{
  0%{
    -webkit-transform:scale(0)
  }
  100%{
    -webkit-transform:scale(1);
    opacity:0
  }
}
```

```
    }  
  }  
  @-moz-keyframes scaleout{  
    0%{  
      -moz-transform:scale(0)  
    }  
    100%{  
      -moz-transform:scale(1);  
      opacity:0  
    }  
  }  
}  
@-ms-keyframes scaleout{  
  0%{  
    -ms-transform:scale(0)  
  }  
  100%{  
    -ms-transform:scale(1);  
    opacity:0  
  }  
}  
}  
@-o-keyframes scaleout{  
  0%{  
    -o-transform:scale(0)  
  }  
  100%{  
    -o-transform:scale(1);  
    opacity:0  
  }  
}  
}  
@keyframes scaleout{  
  0%{  
    transform:scale(0);  
    -webkit-transform:scale(0)  
  }  
  100%{  
    transform:scale(1);  
    -webkit-transform:scale(1);  
    opacity:0  
  }  
}  
}
```

Or you can create a div with inside image or background image,you have [here](#) a few ideas for animation, it have a downloadable set free, enjoy.
