About

Software developer and software architect since the beginning of this century. Used to do a lot web, database and windows applications development but turned my focus to real-time graphics and game development in the past few years.

In terms of programming language preferences, I like everything which is strongly typed and allows me to put more than pointers and integers on the stack. While I enjoy the

beauty and light-heartedness of C#, the greatest programming language to me is (modern!) C++. It took me a while to get into it, but now I really appreciate its features and also its paradigms.
