i'm little confuse while selecting json jar ,sometimes i'm using json-lib-2.2.2-jdk15.jar or sometimes json-lib-0.9.jar which one is appropriate..? Some methods are also change in both of them like json-lib-2.2.2-jdk15.jar uses add() method foa adding in json array and json-lib-0.9.jar uses put for the same work

java

json

Presumably, version "2.2.2" is a stable release that targets Java 5 and above. In contrast, version "0.9" sounds like it was a pre-release developer build. I would select "2.2.2" on that basis.

Unless of course this is a false dichotomy, and they're actually two completely separate projects; in which case I

would evaluate their features and fitness individually.

To digress from your question; I personally would select a recent release of [Jackson](#) or [GSON](#).

Even though i solved my issues by using the jars: commons-beanutils-1.7.jar commons-collections.jar commons-lang.jar commons-logging-1.1.1.jar ezmorph.jar json-lib-2.2.2-jdk15.jar : java4s.com/json/... but here the size is 1.2 mb

@Pankajkumarsharma And it runs on your Server (which uses a fair bit more then 1.2 MB). You might want to lean [maven](#) or [Gradle](#). – Elliott Frisch May 2, 2014 at 5:23
