About

A full-stack trading systems developer: from mechanical sympathy, transistors, cache-line sizes and zero-copy to state-of-the-art neural networks with super-human performance in decision making tasks.

My main interests are machine learning, computer science, software engineering, quantitative finance.

The programming languages I have used the most are C++, Python, JavaScript/TypeScript, bash and Linux command line tools. For research, development and production I use Linux. My development environment is Emacs, my desktop is KDE Plasma.
