

Removing Blog Homepage Title Refinery

Asked 12 years, 6 months ago Modified 12 years, 2 months ago Viewed 812 times

Following the tutorial advice, I've successfully removed the `body_content_title` from other pages. However, on the blog home page I can't seem to get the title to disappear. I've tried setting the `:body_content_title` to null as per the FAQ, but that doesn't seem to work.

```
<% content_for :body_content_title => "" %>
```

Looking at the `index.html.erb` view, it seems that the title information is contained in the line

```
<% content_for :body_content_left do %>
```

but I can't seem to find where the information for `:body_content_left` is entered/rendered. Any help to clear this up would be greatly appreciated!

Thanks for reading this, DC

I've been stucked in this for some hours now, and I figured it out how to solve it.

I'm using refinery-blog Version 2.0.4

and what I did was override the index file:

```
rake refinery:override view=refinery/blog/posts/index
```

then replaced line 19(`<%= render :partial => "/refinery/content_page" %>`) with:

```
<%= render :partial => "/refinery/content_page", :locals => {  
  :remove_automatic_sections => true } %>
```

You can also replace the same line with:

```
<%= render '/refinery/content_page', :hide_sections => :body_content_title %>
```

two ways to write the same thing, but I guess the second one is cleaner.
