## About

I am a veteran of several startups, deeply technical yet comfortable communicating and operating at the business level without jargon. I have created (and been the principle implementer in most cases) many line of business systems for a various industries (Commercial Insurance, Commercial Printing, Optometry, Aerospace Manufacturing and others).

These systems all have over a decade of real world use with the longest running system first implemented in 1985. and its heavily revised descendant remains the cornerstone of

operations to this day. I am now involved in yet another startup initiative, this time in the mobile web space.

My current interests are in using machine learning techniques
