Could not disable session resumption requested by OpenSSL client

I'm developing `SSL` mutual authentication in android to connect to a `HTTPS` website using OpenSSL library. I want to disable session resumption requested by client in OpenSSL; In other words, it is expected from the client not to sent previous session ID in the "Client Hello" message, but it sends.

I tried using `SSL_CTX_set_session_cache_mode(ctx, SSL_SESS_CACHE_OFF)`, but nothing changed.

Can anyone help me disable session reuse?

Thanks

`authentication`   `openssl`   `session`

You're attempting to disable on the server or the Android client? – RoraZ Apr 8, 2015 at 11:18

I want to disable from client-side. – user3406222 Apr 8, 2015 at 20:45

Are you setting the cache mode of the `SSL_CTX` prior to the first connection using that ctx, or afterwards? – frasertweedale Apr 9, 2015 at 1:01

You also need to turn off session tickets. – RoraZ Apr 9, 2015 at 12:02 ✏

It's set prior to the first connection – user3406222 Apr 11, 2015 at 9:48
