About

I'm a software developer with a Ph.D. in computer science. Since I enjoy writing software and algorithms and tend to care about good software design, industry was a more natural fit for me than academia. I'm interested in lots of things, but computer science and software development are arguably my ruling passions. For more than a decade, my work has mainly focused on software for medical physics.

The web page listed in my profile isn't up to date anymore but it gives some background and it was still available last I checked in November of 2023. I have a [linked-in profile](#) as well.
